

SuperPOSS PRO provides meaningful information that is easily accessible for making key decisions and avoiding costly errors.

Highly-developed information systems are necessary to survive in this era of knowledge-based business. SuperPOSS PRO is a full pricing, financial reporting and merchandise scan support system designed specifically for food & drug retail environments. Easy to use screens enable quick and easy access to all available functions. Steadily enhanced and upgraded for more than 20 years, SuperPOSS is a proven retail solution with abundant features.

SuperPOSS PRO supplies complete price management, movement tracking, product listing and reporting capabilities. Features like these improve service and quality, cut costs, and make quick decisions easy by providing the information you need.

Sophisticated multi-user/multi-tasking allows you to work more efficiently. With MEISolutions' features, you can easily input price changes, verify shelf information, and receive backdoor deliveries, all at the same time.

Also, SuperPOSS PRO's functionality and rich feature set run on a variety of industry standard operating platforms.

Operating Systems

Windows 98
Windows 2000
Windows XP
Windows NT

Current Registers

ScanMaster
ICL ISS45
Datasynt

Upcoming Registers

IBM Ace

The continued improvement and upgrading of the SuperPOSS system is an essential piece of MEISolutions' ongoing commitment to SuperPOSS users.

SuperPOSS PRO, MEISolutions' Windows based backoffice software with a Graphical User Interface (GUI) is ready for the market. The software design for SuperPOSS PRO has gone through extensive cosmetic and testing phases ensuring that the stability and ease of SuperPOSS will be incorporated into a Windows platform. This new version adds several new features that make SuperPOSS PRO faster and easier for new and experienced scan coordinators to use. Some of the added features include:

Grouping of similar SuperPOSS functions into Windows style drop-down menus.

Sub-screens with easier to follow logic.

Screens and menus with interactive keyboard and mouse control providing the ease of point-and-click functionality.

All reporting options listed in a separate drop-down menu increasing the ease of reporting.

Date entries include a calendar menu to insure accurate creation of promotions, batches and other SuperPossPRO features that have start and end dates.

Enhanced security features allowing different user and manager control levels.

New drivers available for ODBC access of data.

Historical Financial Reporting.

Enhanced file integrity checking.

Soon to include Frequent Buyer, and new register interfaces.

FEATURES

Point and Click Functionality

Drop Down Menus

Calendar Pop-Ups

Enhanced Security

MEISolutions' DSD streamlines product flow from vendor to customer, eliminating costs and providing a competitive advantage through that kind of control.

All retailers want to have more control over their store operations. With MEISolutions Direct Store Delivery working in your store, you'll receive and verify deliveries at your receiving work stations, and report on gross margin to better track profitability.

For example, you can verify an incoming retail price with your POS price and check vendor files for costs, discounts and authorized items. You can also compare receiving totals against vendor invoice totals instantly. You'll also protect against unauthorized deliveries, as well as computational errors. Accuracy and consistency is maintained by transferring receiving details to your accounts payable system. On-line receiving lets you suspend one vendor to receive another.

MEISolutions' DSD and SuperPOSS PRO share the same database. This link to your front-end system lets you update the on-hand count in SuperPOSS PRO, giving you the power to track profitability of DSD items based on actual POS movement. Through single file access and actual sales data from SuperPOSS PRO, DSD allows for both "going in" and "going out" gross margin reporting.

MEISolutions' DSD definitively closes the loop in inventory control, making it easier for the retailer to get ahead.

DSD

Features

- FM and keyboard receiving
- Extended vendor invoices
- Update on-hand inventory
- Suspend/Resume receiver(s)
- Control future costs
- Track current and future deals
- Generate retail price changes based on desired margin
- Transfer receiving detail to A/P
- Weekly recap
- Host support
- Item profitability
- Vendor recap reporting
- Print shelf tags through FM
- Automatically compute deposit changes

The power and speed of a computer, with the portability of a wireless FM Network: MEISolutions' PFM network is designed to make your information system work for you.

MEISolutions' PFM's extensive inventory management utilities allow you to perform a physical inventory and compare it to book, wall-to-wall inventories, or inventories divided by department and category. Ethernet and Serial communication modes are available. The PFM lets you use one or more portable entry terminals to perform shelf audits, make on-the-spot price changes, take inventory, perform PLU file maintenance and verify direct store deliveries.

The information collected can be immediately updated on the Point of Sale device or held for later communications. While running the network, each portable entry terminal becomes, in effect, a remote computer terminal from which you can access certain SuperPOSS functions.

The PFM runs in the background, leaving the keyboard free for:

- Price changes
- Financial reporting
- Movement reporting

Multiple FM device types are supported, including:

- Symbol
- AML
- Norand
- Telxon

PFM INTERFACE

Functions and Features

- Inventory status reporting
- PLU inventory
- PLU reorder
- Out of stock
- Security/designated user ability
- Item change through FM
- Apply maintenance from FM to POS
- Create promotional batches
- Modify PLU records
- Field data duplication by scanning
- Inventory recount report
- Audit statistics report
- PFM Status report
- Audit frequent buyer discounts
- FM Store opening/store verification

In the present ever-changing competitive environment, retailers need a method for establishing customer loyalty.

Fostering customer loyalty and attracting new business are the two most critical functions of a store's marketing campaign. MEISolutions's Frequent Buyer Program is a function that addresses these issues directly.

Frequent Buyer for NCR ScanMaster and ICL tracks each customer's purchases in the store, as individuals or in demographic groups. With Frequent Buyer you can use SuperPOSS to maintain a customer file containing each customer's name, number and other pertinent information. SuperPOSS can retrieve customer transaction data during its End of Day Processing routine and use the information to provide a range of reports for managing and promoting sales at your store. The program enables you to tailor your store's operation to the specific needs and desires of your customers.

A Frequent Buyer discount acts as an "electronic coupon" which is automatically applied through the register. The register receipt tape will show the customer an item's regular price as well as the amount of the Frequent Buyer savings.

Frequent Buyer lets you print customer lists and mailing labels for all your Frequent Buyer customers. In addition, you can sort by separate customer categories, such as new Frequent Buyer customers, active or inactive customers, or those whose purchases have totaled a specific minimum.

FREQUENT BUYER

Features

- Customer file maintenance functions
- Easy application of FB promos
- Tracking of FB customer transactions by individual and customer type
- FB transaction reports
- Vendor invoices showing sales of "electronic coupons" or "motorized credit" items
- Extensive customer listing and mailing label capabilities

TOTAL SAVINGS

When your store offers special prices to customers, you want them to recognize the savings.

MEISolutions' Total Savings allows you to show your customers a total of all the savings they received by shopping at your store. This program is designed for retailers who want to show a total savings amount on the customer's receipt without using frequent shopper cards. Total Savings provides the ability to add savings information printed on a customer's receipt with a special program on the register.

When you put an item on AD/sale, TPR, the Total Savings module calculates the difference between the regular price and the sale price, then clearly displays the sum of these savings on the customer's receipt.

MEISolutions' Total Savings interfaces with the You Saved application for Scanmaster users; and with the Total Savings component of the ICL ISS45 system.

The features and functionality of SuperPOSS PRO offers users maximum control of their backoffice investment.

Every grocery or retail store has its own unique systems for inventory, purchasing, reporting – and the many other administrative functions necessary to maintain daily operations. In addition to the PFM, DSD, Total Saving and Frequent Buyer functions, users also receive the following features:

Network Manager: A system that allows multiple users to access SuperPOSS from different networked workstations at the same time.

FM Receiving: Handheld scanner system that allows user to track products being delivered to the store.

Extended Movement Reporting: Ability to report for the last 7 days, 13 weeks, 5 quarters, and 4 user-defined periods. Pull reports by Department, Category, or Vendor. Report on UPC ranges, fast, slow, and zero movers.

Tag and Sign Utility: Provides interface to 3rd party label printing software.
